UNIFIED ADS MANAGEMENT PLATFORM

One workspace for Google Ads + Meta Ads • campaigns • conversions • reporting • billing

GOOGLE ADS META ADS

01 CUSTOMER SETUP

Start with the customer, connect ad accounts, then configure measurement.

1. Create workspace

Customer entry

- Sign up / log in
- Create workspace and invite team
- Choose workspace and permissions

2. Connect ad accounts

OAuth connection

- Connect Google Ads account(s)
- Connect Meta Business / ad account
- Choose accounts and approve permissions

3. Set up conversion tracking

Track outcomes on the website

- Google: conversion action + Google tag / GTM
- Meta: Pixel / Dataset + event testing
- Optional later: server-side event integrations

02 UNIFIED WORKSPACE

Most screens are shared; platform-specific fields and actions stay clearly labelled.

Overview & analytics

A single performance view

- Spend, impressions, clicks, conversions
- Compare by platform and date range

Campaign manager

One campaign list

- Search, filter, pause / resume
- Edit budgets where the provider allows

Conversion tracking

A dedicated measurement area

- Google conversion actions and tag status
- Meta Pixel / Dataset, events and diagnostics

Ad groups, ad sets & ads

Shared navigation, separate editors

- Google: campaigns → ad groups → ads
- Meta: campaigns → ad sets → ads

Creatives & audiences

Browse together, edit per platform

- Creative / asset library and previews
- Audiences, targeting and provider-specific rules

Reports & exports

Understand outcomes

- Conversions, CPA, ROAS and trend reports
- CSV export and data-freshness indicators

03 BILLING — KEEP THESE TWO THINGS SEPARATE

A shared Billing menu can show both, but they represent different payments.

YOUR PLATFORM BILLING

Subscription to your SaaS

Plan and usage
Your invoices and payment method
Upgrade, downgrade or cancel plan

GOOGLE / META AD BILLING

Advertising spend billed by the platforms

Show spend / payment status only where APIs permit
Provider payment methods and invoices may need their own portal
Never imply the SaaS subscription pays for ad spend

04 BEHIND THE SCENES

One user interface, shared services, and separate provider integrations.

Web app / UI → Shared API + database → Provider adapters: Google Ads API • Meta Marketing API

Important: connecting an ad account does not install website tracking automatically. Website / CMS / tag-manager access may be required.
